

Hi Dominic

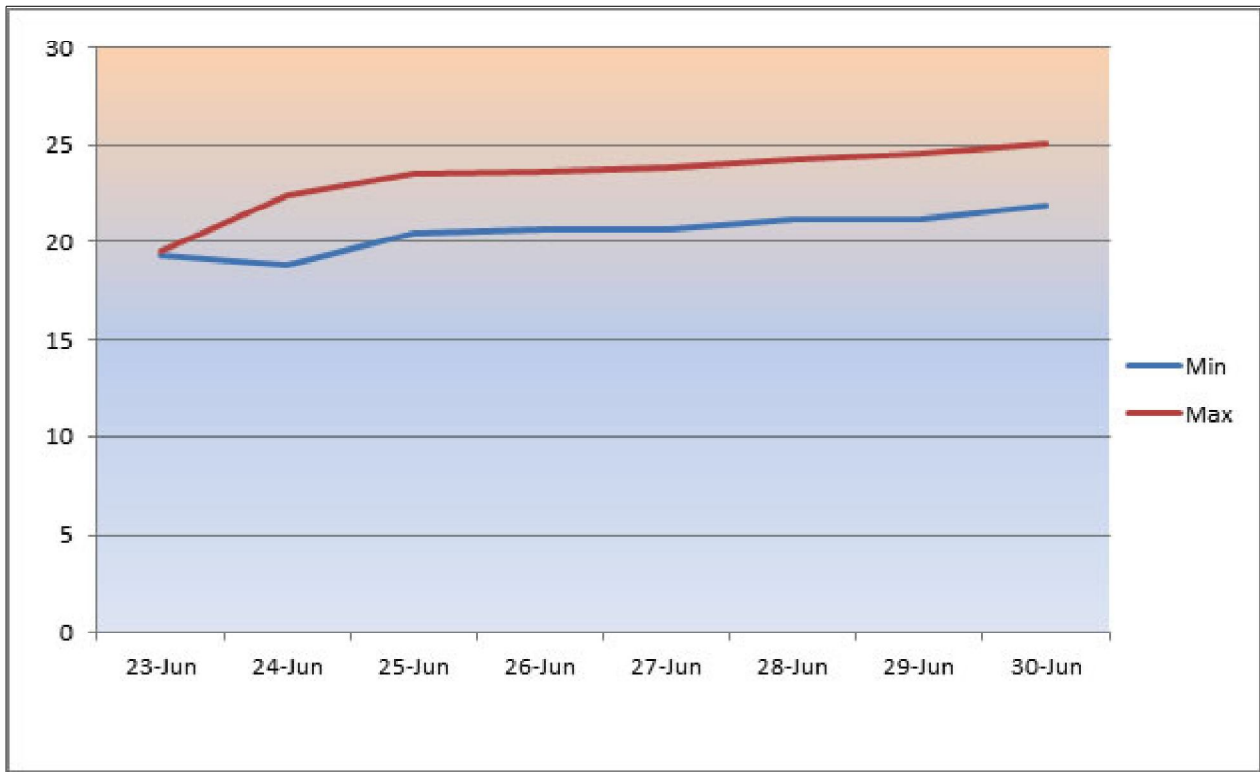

I thought this might prove interesting to you. We installed our Hi-Temp Solar Heating a few weeks back and with our electronic pool thermometer, we can monitor the impact of the Solar Heating on our 5mx3m pool. We can see how much heat it loses at night and what the highest and lowest temperatures are. We had the heating off for a few days and the pool temp dropped to 18 deg, you can see that it's over 25 deg's now.

12 hour measurement, as you can see at 06h00 yesterday, the temp was fractionally higher this morning. That has been the same over the last week....  
Below graph

At 08h17 this morning
